# LibData

DLF Tools Registry #: 0000001

**Project homepage**

## Project Description

LibData is a library-oriented, Web-based application which provides authoring environments for subject pathfinders (Research QuickStart), course-related pages (CourseLib) and general-purpose Web pages (PageScribe). LibData encompasses all of these applications, but a typical installation need only take advantage of one or two of them -- great local variation and emphasis is possible.
